

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

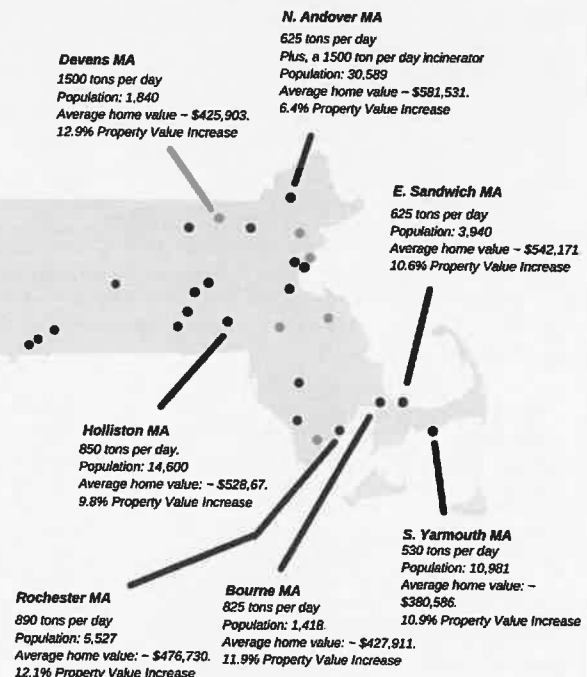

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

#### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" FALSE
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." FALSE
- "There is not another 500-ton station in Massachusetts in a town our size." FALSE

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

Address: 18 Bailey Lane

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

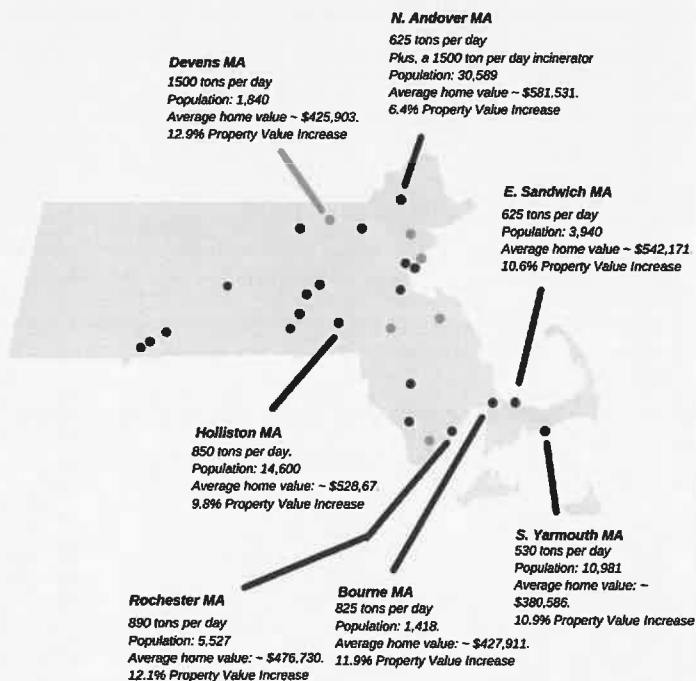

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

##### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" **FALSE**
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." **FALSE**
- "There is not another 500-ton station in Massachusetts in a town our size." **FALSE**

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

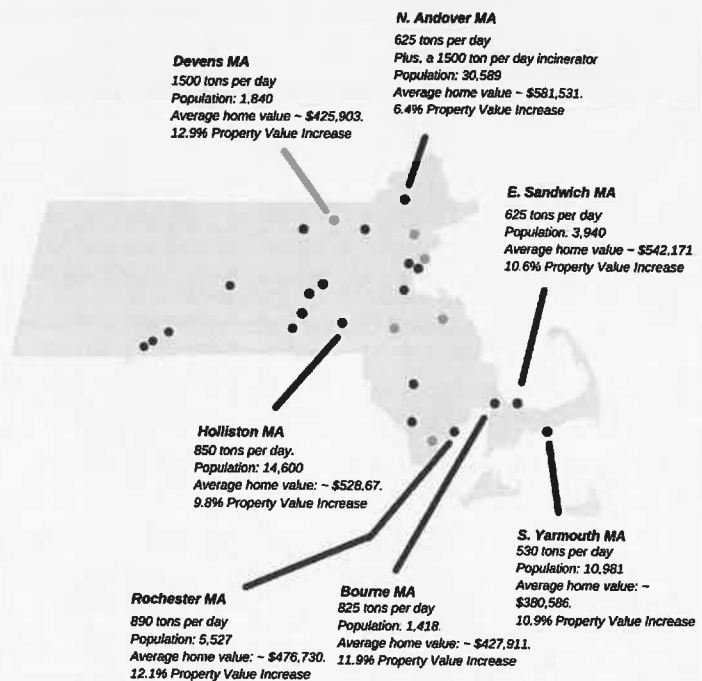

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

#### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" **FALSE**

Each red dot represents a Transfer Station of 1000 tons or more.  
\*Property values source Zillow.com

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

Address: 54 Pond St

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

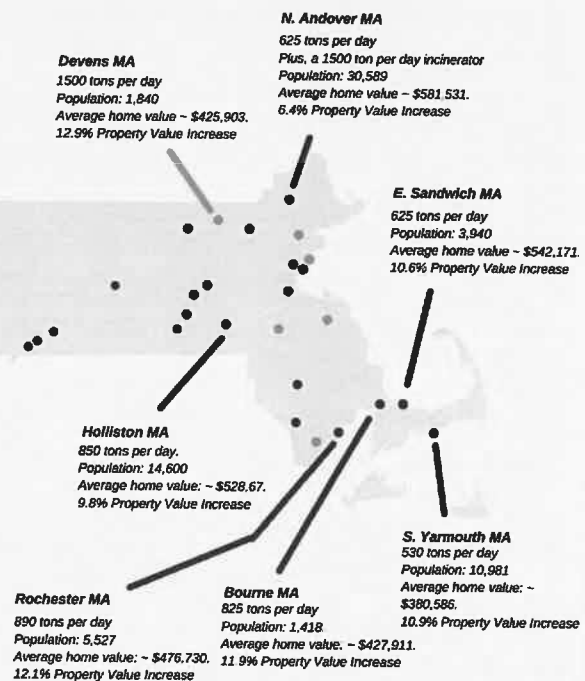

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

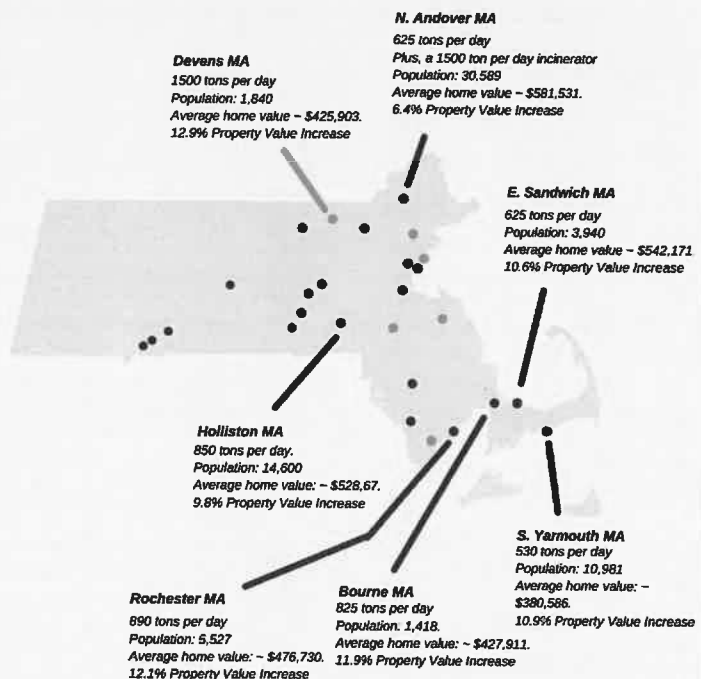

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

#### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" **FALSE**
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." **FALSE**
- "There is not another 500-ton station in Massachusetts in a town our size." **FALSE**

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

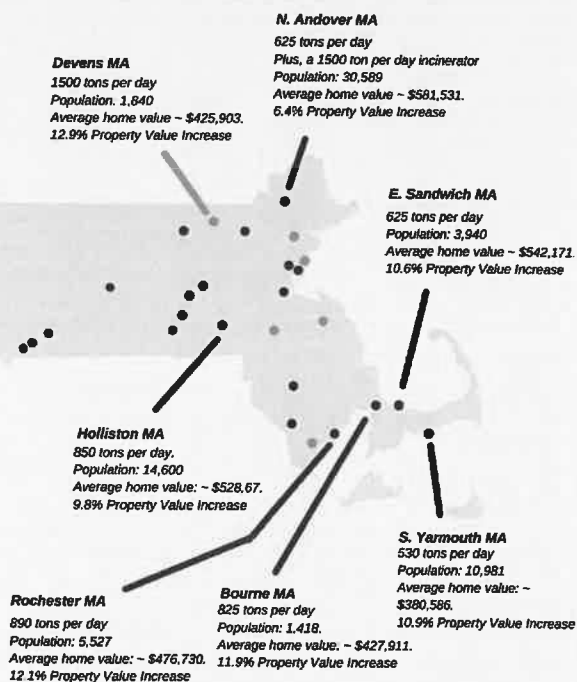

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

#### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" FALSE
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." FALSE
- "There is not another 500-ton station in Massachusetts in a town our size." FALSE

Each **black dot** represents a Transfer Station of 500 tons or more.

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

Address: 119 E main ST.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

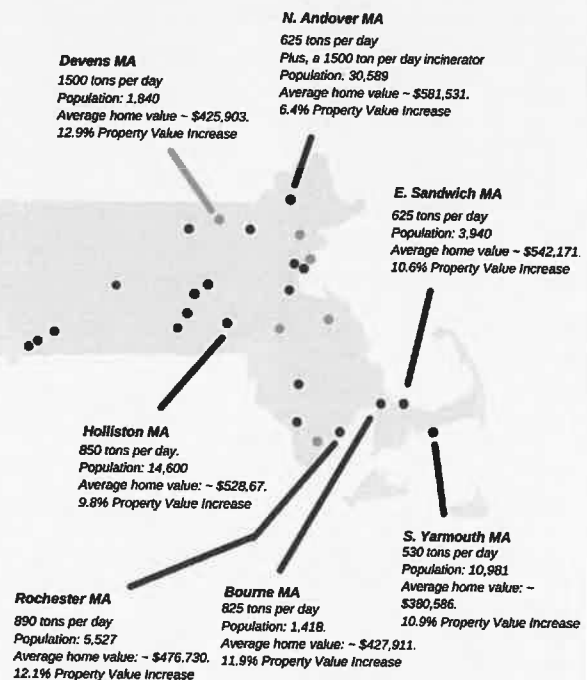

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

#### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" **FALSE**
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." **FALSE**
- "There is not another 500-ton station in Massachusetts in a town our size." **FALSE**

Each **black dot** represents a Transfer Station of 500 tons or more.  
Each **red dot** represents a Transfer Station of 1000 tons or more.

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

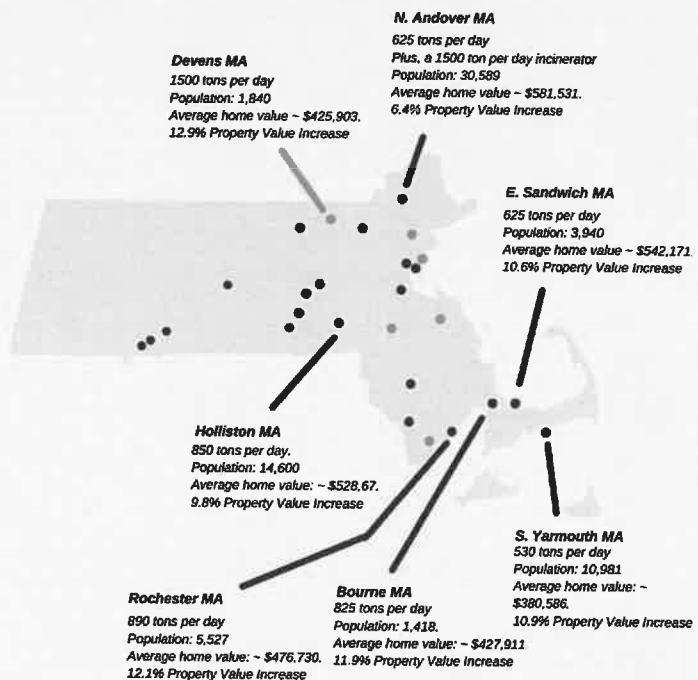

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

##### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" FALSE
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." FALSE
- "There is not another 500-ton station in Massachusetts in a town our size." FALSE

Each black dot represents a Transfer Station of 500 tons or more.

To Georgetown Officials:

As a Georgetown resident and customer of the Mello Transfer Station I want to express my strong support for the relocation of the facility to a new state-of-the-art site on Carleton Drive near Route 95 and away from the center of town.

The new environmentally friendly, fully enclosed facility will have a higher capacity for transferring recyclables and household waste - but it will still be far smaller than transfer stations in similar size communities including North Andover, Ayer and Devens.

The opposition to the new site isn't based on the facts:

- Many small towns in Mass have similar-sized facilities,
- Mello has committed to plant hundreds of trees and shrubs, remove existing fill piles and debris and invasive species, re-establish native wetland plantings and add plantings that support local wildlife,
- The new site will Move Traffic Away from the center of town -- good for Georgetown.

The Mello family and their business have been good citizens of Georgetown for decades and I hope you will act to approve the new location.

Thank you.

## Setting the Record Straight

Opponents of Mello Transfer's move to Carleton Drive have made factually inaccurate claims that need to be corrected. Georgetown citizens and municipal officials deserve accurate information in order to make sound decisions.

Opponents of the move have repeatedly given false information on tonnage accepted at other transfer stations, claiming our proposal is out of line with others, often calling it the largest ever proposed, and raising false fears about the effect of a transfer station on property values.

### We Believe Facts Matter

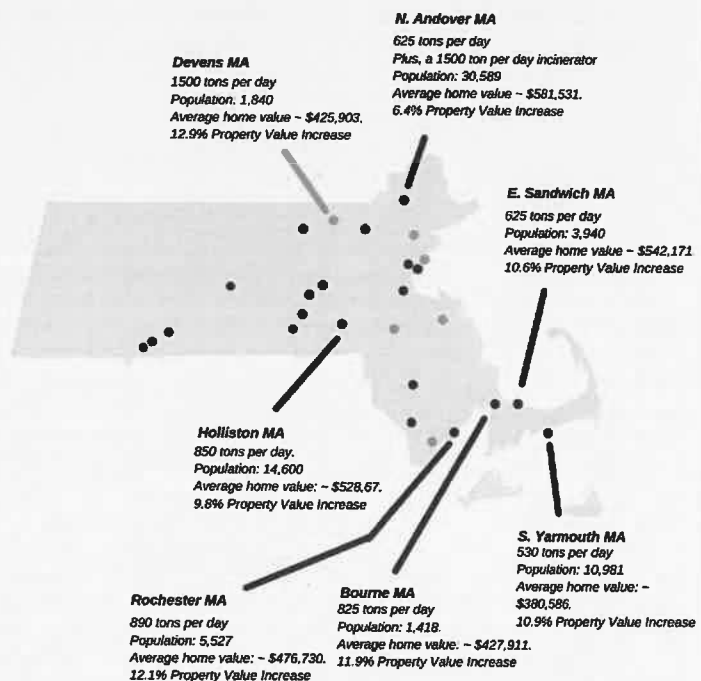

#### Facts:

- There are 29 Transfer Stations in Massachusetts with capacities of 500 tons or more.
  - 8 stations are licensed for more than 1000 tons, twice as large as what we have proposed.
  - As you can see on the map, there are five towns smaller than Georgetown that have significantly larger transfer stations than we have proposed.
  - ALL five of these communities have seen a continuous upward trend in property values.\*

#### Fiction on the Opponents' Web Page:

##### Fiction:

- "If Georgetown residents accept this plan, we would become the town accepting the largest tonnage of materials per resident in the entire state!" **FALSE**
- "Cities like Brockton, Haverhill, and Taunton have accepted 500-ton transfer stations, not small towns like Georgetown, with a population of less than 9,000." **FALSE**
- "There is not another 500-ton station in Massachusetts in a town our size." **FALSE**
